

CSS reference

Use this **CSS reference** to browse an <u>alphabetical index</u> of all of the standard <u>CSS</u> properties, <u>pseudo-classes</u>, <u>pseudo-elements</u>, <u>data types</u>, <u>functional notations</u> and <u>at-rules</u>. You can also browse <u>key CSS concepts</u> and a list of <u>selectors organized by type</u>. Also included is a brief <u>DOM-CSS / CSSOM reference</u>.

Basic rule syntax

Style rule syntax

```
style-rule ::=
    selectors-list {
        properties-list
    }
... where:

selectors-list ::=
    selector[:pseudo-class] [::pseudo-element]
    [, selectors-list]
```

[property : value] [; properties-list]

See the index of <u>selectors</u>, <u>pseudo-classes</u>, and <u>pseudo-elements</u> below. The syntax for each specified <u>value</u> depends on the data type defined for each specified <u>property</u>.

Style rule examples

```
strong {
  color: red;
}

div.menu-bar li:hover > ul {
  display: block;
}
```

For a beginner-level introduction to the syntax of selectors, see our <u>guide on CSS Selectors</u>. Be aware that any <u>syntax</u> error in a rule definition invalidates the entire rule. Invalid rules are ignored by the browser. Note that CSS rule definitions are entirely (ASCII) <u>text-based</u> , whereas DOM-CSS / CSSOM (the rule management system) is <u>object-based</u> .

At-rule syntax

As the structure of at-rules varies widely, please see <u>At-rule</u> to find the syntax of the specific one you want.

Index

Note: The property names in this index do **not** include the <u>JavaScript names</u> where they differ from the CSS standard names.

Selectors

The following are the various <u>selectors</u>, which allow styles to be conditional based on various features of elements within the DOM.

Basic selectors

Basic selectors are fundamental selectors; these are the most basic selectors that are frequently combined to create other, more complex selectors.

- <u>Universal selector</u> *, ns|*, *|*, |*
- Type selector elementname
- Class selector .classname
- ID selector #idname
- Attribute selector [attr=value]

Grouping selectors

Selector list A, B

Specifies that both *A* and *B* elements are selected. This is a grouping method to select several matching elements.

Combinators

Combinators are selectors that establish a relationship between two or more simple selectors,

such as "A is a child of B" or "A is adjacent to B."

Adjacent sibling combinator A + B

Specifies that the elements selected by both *A* and *B* have the same parent and that the element selected by *B* immediately follows the element selected by *A* horizontally.

General sibling combinator A ~ B

Specifies that the elements selected by both *A* and *B* share the same parent and that the element selected by *A* comes before—but not necessarily immediately before—the element selected by *B*.

Child combinator A > B

Specifies that the element selected by B is the direct child of the element selected by A.

Descendant combinator A B

Specifies that the element selected by B is a descendant of the element selected by A, but is not necessarily a direct child.

Column combinator A || B 👗

Specifies that the element selected by *B* is located within the table column specified by *A*. Elements which span multiple columns are considered to be a member of all of those columns.

Pseudo

Pseudo classes:

Specifies a special state of the selected element(s).

Pseudo elements ::

Represents entities that are not included in HTML.

See also: Selectors in the Selectors Level 4 specification

Concepts

Syntax and semantics

- CSS syntax
- At-rules
- Cascade
- Comments
- Descriptor
- Inheritance
- Shorthand properties
- Specificity
- Value definition syntax
- CSS unit and value types
- CSS functional notations

Values

- Actual value
- Computed value
- Initial value
- Resolved value
- Specified value
- Used value

Layout

- Block formatting context
- Box model
- Containing block
- Layout mode
- Margin collapsing
- Replaced elements
- Stacking context
- Visual formatting model

DOM-CSS / CSSOM

Major object types

- <u>Document.styleSheets</u>
- styleSheets[i].cssRules

- cssRules[i].cssText (selector & style)
- cssRules[i].<u>selectorText</u>
-
 HTMLElement.style">HTMLElement.style
- HTMLElement.style.<u>cssText</u> (just style)
- Element.className
- <u>Element.classList</u>

Important methods

- CSSStyleSheet.insertRule()
- cssstyleSheet.deleteRule()
